INDEX.

Africa, Southern, observations on, in a letter to Sir James M'Grigor, 377
Alison, Dr, his Elements of Physiology noticed, 208
Alexander, Captain J. E. his account of the Pitch Lake in Trinidad, 94
Ancient geological changes in England, by Dr Fitton, 300
Army regulations in regard to the study of natural history and botany, 208
Arnot and Wight on some rare genera of plants, 297
Arsenical pyrites, analysis of, by Hoffmann, 194

Barbadoes, hurricane of 1831, 180
Barometric Measurements of the height of Cheviot, by Sir T. M. Brisbane and Mr Galbraith, 69
Bhurtpore district, geology of, by Hardie, 76
Birds, on their youth, age, diseases, sleep, and death, by Fr. Faber, 97 —their instincts considered, by Mr Blackwall, 241
Blackwall on the instincts of birds, 241
Blesson, Major, his observations on the ignis fatuus, or Will-with-the-wisp, and thunder-storms, 90
Brewster, Sir David, on the colours of natural bodies, 393
Brisbane, Sir Thomas M., his barometrical measurement of the Cheviots, 69
Bones, gelatine of, 182
Buch, Baron Von, his observations on the silicification of organic bodies, 53
Butter, on the quantity of, consumed in Britain, 199

Campagna di Roma, malaria of, 114
Canada, dark days of, 221
Caspian Sea, observations on the geology of, by M. Eichwald of Wilna, 122, 324
Casting statues in metal, thoughts on, 364
Cave at Cefn in Denbighshire, account of, by the Rev. E. Stanley, 40
Celestial Phenomena for the meridian of Edinburgh, from January 1. to April 1. 1833, 177—from April 1. to July 1. 1833, 374
Chabasites, analyses of, 194
Cheviots, height of, determined by Sir Thomas Brisbane and Mr Galbraith, 69
Comparative temperature of whites and negroes, 181
Compass, on the deviation of, by the Rev. William Scoresby, 30
Coniferæ, observations on those at present growing in Australia, by D. Don, F. L. S., 158
Connell, Arthur, account of an acid liquid obtained through the agency of potash, and on the nature of the lampic acid, 231
Continent, new, account of, 378

XUM

Copeland, William, Esq. his analyses of the limestones of Barjarg and Closeburn in Dumfriesshire, 194
Copper in meteoric iron, 180
Crops, on the rotation of, by M. Macaire, 215
Cuvier, death of, 209—his eloge, by Baron Pasquier, 232

Dalton, John, his experiments on the quantity of food taken by a person in health, compared with the quantity of the different secretions during the same period, with chemical remarks on the different articles, 62
Don, David, his observations on the Coniferæ growing in New Holland, 158—his additional remarks on Ercilla, Macromera, Aitonia, and Citronella, 261
Douglas, Sir Howard, his observations on naval tactics, 159

Eichwald on the geology of the neighbourhood of the Caspian, 122, 324
Entozoa, presence of, in the eyes of animals, 185

Faber on the youth, age, diseases, sleep, and death of northern birds, 97
Faraday, his observations on the planariæ, 183
Fitton, Dr, on ancient geological changes in England, 300
Food, experiments on the quantity of, taken by a person in health, compared with the quantity of the secretions during the same period, 62
Forbes, James, his observations on latitude of Chamouni, 375—his researches on conducting power of metals as to heat and electricity, 396—his notice of optical phenomena on the Rigi, 400
Fossil bones from New Holland, account of, by Mr Pentland, 120
Fossil woods from New South Wales, account of, by Mr Nicol, 155
Frontal sinus, observations on, by Thomas Stone, M. D., 82

Galbraith, William, his observations on the height of the Cheviots, 69—his remarks on Borda's geometrical measurement of the height of the Peak of Teneriffe, 327
Gairdner, Dr, his Natural and Chemical History of Springs noticed, 202
Gelatine of bones, observations on, 182
Geology of the Bhurtpore district, 76—of the Valley of Oodipoor, 263—of the neighbourhood of the Caspian Sea, 122, 324
Girsupah, account of the falls of, 385
Goring, R. C., M. D., his Microscopic Cabinet noticed, 206
Graham, Professor, his account of new and rare plants raised in the Edinburgh Royal Botanic Garden, 173, 370
Granular rocks, relative position of, 194
Growth of plants, M. Moreen on the influence of coloured rays on, 391

Hardie, James, on the geology of Bhurtpore, 76; on the geology of Oodipoor, 263
Harmotome from strontian, 195
Hausmann, Professor, his sketches of South European nature, 326
Heeren, A. H. L., sketch of his life, 104
Higgins, W. M., his Illustrations of the Mineral and Mosaical Geologies noticed, 204; his remarks on electrical decompositions, 314

Huber, Francis, his life and writings, by Professor M. P. De Candolle, 283
Hurricane, Barbadoes, of 1831, 180
Hygrometrical observations made at Bancoorah by Mr Macritchie, 230

Ice, specific gravity of, 197
Ignis Fatuus, or Will-with-the-Wisp, observations on, by Major Blesson, 90
Illusions in maniacs, 379
Inflammation of the Fraxinella, the Dictamnus alba, 395
Innes, George, celestial phenomena from January 1. to April 1. 1833, 177; also from April 1. to July 1. 1833, 374
Instincts of birds, Mr Blackwall on, 241
Johnston, J. F. W., on the super-sulphuretted lead of Dufton, 397—his observations on the gradual rise of land in high northern latitudes, 401
Irish trade with England, 201

Kamtz, Professor, his meteorological observations made on the summit of the Faulhorn, in Switzerland, 335.
Knox, Dr, his observations on the natural history of the salmon, 397

Labour, ancient price of, 198
Limestones of Barjarg and Closeburn, analyses of, 194

Macaire, M. his observations on the rotation of crops, 215
Machine, on the relations that subsist between it and its model, by E. Sang, 149
Macritchie, Rev. W., his tables of the temperature and pressure of the atmosphere at Clunie-manse, in Perthshire, for eight years, 306
——— George, his hygrometrical observations made at Bancoorah, 203
Malaria of the Campagna di Roma, 114
Merryweather, George, his apparatus for maintaining an uniform temperature, 360
Meteoric iron found to contain copper and molybdena, 180
Mosaical and Mineral Geologies illustrated and compared by Higgins, 204
Medical Botany, by H. Reid, recommended, 206
Meteorological table kept at Kinfauns Castle, 359
Microscopic Cabinet, by Dr Goring, M. D. and A. Pritchard, 206

Natural history, the study of, now required by the regulation of the Army Medical Board, noticed, 208
Naturalists, meeting of, at Vienna, 189
Naval tactics, Sir H. Douglas's observations on, 159
Nerves, on their reproduction, 187
New Holland, account of fossil bones from, 120
Nicol, William, his observations on fossil woods, from Newcastle, in New South Wales, 155

Obesity, a remarkable case, described, in a communication to the Royal Society of London, 381

XUM

Owen, Richard, his memoir on the pearly Nautilus, or Nautilus pompilius, noticed, 207

Patents, list of, granted in Scotland from September 18. 1832, to March 13. 1833, 207, 404
Pearly Nautilus, memoir on, noticed, 207
Pearls, on the formation of, 185
Pentland, Mr, his observations on fossil bones from New Holland, 120
Pitch lake of Trinidad, notice of, by Captain Alexander, 94
Planariæ, observations on, by Faraday, 183

Respiration of the lower animals, observations on, 382
Robison, John, his thoughts on the casting of statues in metal, 364
Rome, on the physical constitution of, 1
Royal Society of Edinburgh, its proceedings fully reported, 394

Sang, Edward, his remarks on the relation which subsists between a machine and its model, 145—his new solution of a case of spherical trigonometry, 311
Scoresby, William, his observations on the deviation of the compass; with examples of its fatal influence in some melancholy and dreadful shipwrecks, 30
Seal found in the interior of New Holland, 382
Silicification of organic bodies, observations on, 53
Silver mines of Kongsberg, 194
Society for Encouragement of the Useful Arts, proceedings of, 402
Stanley, Rev. Edward, memoir on a bone-cave visited by him in Denbigshire, 40
Stone, Dr, his observations on the frontal sinus, 82
Stature of the human race, 182
Sulphate of lime, fertilizing property of, 195
Symmetry, on the limit of the law of, and the forces which determine the forms of inorganic bodies, 132

Temperature, comparative, of whites and negroes, 181
Tiedemann on the reproduction of nerves, 187
Trigonometry, spherical, on a new solution of a case in, 311

Ultramarine, French, 197

Vienna, meeting of naturalists, account of, 189
Water, secretion of, by certain plants, 195
Water spout, notice of one by Mr Mackintosh, 180
Watson, Hewitt, observations made during the summer 1832, on the temperature and vegetation of the Scottish Highland mountains, 317
Will-with-the-wisp, observations on, 90
Witham, Henry, his observations on the Lepidodendron Harcourtii, 367

NEILL & CO. PRINTERS, OLD FISHMARKET.
